

1 Developer asks a reachability question

Q: How does the *ModalManager* prevent scrolling?

TS ModalManager.ts

```
206 export class ModalManager {
249   mount(modal: Modal, props:
251     const containerInfo = this.
      containers[containerIndex];
252
253   if (!containerInfo.restore) {
254     containerInfo.restore =
      handleContainer(containerInfo,
        props);
255   }
256 }
```

Answer

It prevents scrolling by using the `handleContainer`...

Descriptive tour of code

The code sets `scrollContainer.style.overflow` to `hidden` to lock scrolling ...   walk me here

Replayable Walkthrough

I started here ...

`export class ModalManger {`

I decided to look for more info about `mount`
`mount (modal: Modal, props:`

I decided to look for more info about ...
`handleContainer(containerInfo,`
